Ian Marsh 2007-01-24

Presenting a clear, comprehensive review of theoretical thinking on crime, this book encourages students to develop a deeper understanding of crime, and the causes of crime and provides an interdisciplinary approach to criminology through the contributions of sociology, psychology, and biology. A key text for any undergraduate student following programmes about crime, criminal justice, Theories of Crime covers topics such as: the historical context of crime biological explanations for criminal behaviour psychological explanations for crime
criminal behaviour sociological explanations for the criminal behaviour the criminal behaviour of women the criminal behaviour of ethnic minorities. By adopting an interactive approach to encourage students to react to the text and think for themselves, this book distinguishes itself from others in the field and ensures its suitability as a valuable teaching resource. Fundamentals of Criminology Kelly Frailing 2013-07-19 Fundamentals of Criminology: New Dimensions delivers a comprehensive and comprehensible introduction to the discipline of criminology. As the title implies, it contains the essentials of criminology, the major theories of crime causation, classic and current empirical tests of those theories, the strengths and weaknesses and the policy implications of each. It also describes the types of crime and provides current rates, trends, and in-depth coverage of emerging areas in crime, including cybercrime and human trafficking, as well as a discussion of characteristics of offenders and victims. What sets this book apart from the many other fine criminology textbooks out there is its inclusion of some new dimensions of criminology. The new dimensions in this book include but are not limited to research designs in criminology, new theories of crime causation, crime in different contexts, connections between criminalization and criminal justice policy and a number of other issues from different disciplines. In combination with the fundamentals, these new dimensions are designed to provide readers with the richest, most complete understanding of what crime is, how much of it there is, what and why it happens, as well as the ability and desire to pose important questions for the future of both criminology and criminal justice. "The authors have produced a comprehensive, readable, and thoroughly interesting text covering the fundamental sociological criminology. Yes, there are a plethora of texts in this area, but Harper and Frailing’s addition to the field has a number of features moving it ahead of the competition. There is in-depth coverage of leading theories of crime, including cybercrime and human trafficking, as well as an excellent section on how disasters augment the opportunities for crime by hindering capable guardianship. The authors’ arguments for evidence-based crime prevention strategies and public policies are compelling. Fundamentals of Criminology is worthy of the closest consideration by instructors teaching undergraduate criminology courses." — Jay Corzine, professor of criminal justice, University of Florida Conservation Criminology Meredith L. Gore 2017-03-14 This important new text introduces conservation criminology as the interdisciplinary study of environmental exploitation and risks at the intersection of human systems and nature. Using an interdisciplinary approach, the book enhances understanding of the various human and organizational behaviors that pose risks to the environment, humans, and drive conservation crime. It is of great use to the increasing global growth, global market economies, climate change, deforestation, and illegal exploitation of natural resources continue to increase, academic research from numerous disciplines is needed to address these challenges. Conservation Criminology promotes thinking about how unsustainable natural resources exploitation is a cause and a consequence of social conflict. Case studies profiled in the book demonstrate this cause and effect type situation, as well as innovative approaches for reducing it to people and the environment. This text encourages readers to consider how humans behave in response to environmental risks and the various mechanisms that constitute effective and ineffective approaches to protecting our environment. Understanding Everyday Racism Philemona Essed 1991-07-25 Understanding Everyday Racism is a highly readable book that challenges readers to rethink the very latest empirical evidence with regard to the risk factors that produce antisocial and criminal behavior. The authors meaningfully integrate risk factors identified by more than a dozen academic disciplines that increase the odds of antisocial behavior and criminality. The result is a new interdisciplinary approach that helps students overcome traditional barriers and overcomes the "disciplinary myopia" that plagues criminological theory. Unlike the typical criminological theory text, this book actually advances the state of criminological theory as well as the field of criminology as a whole. A Criminology of War? Stephen B. Ofshe 2012-08-23 A Criminology of War? provides an interdisciplinary approach to the academic study of war, integrating the disciplines of macro- and micro-sociology, economics, anthropology, psychology, political science, history, and ecology. This book examines war in the context of crime and criminality. Combining ethnographic research with theoretical issues, the authors present an in-depth analysis of war and its societal consequences. This book is written for graduate-level students and researchers in the behavioral sciences, political science, policy studies, and law enforcement agencies. It is also useful for professionals interested in conflict resolution.
environmental degradation has prompted unprecedented attention being paid towards the criminal liability of individuals and corporations involved in polluting activities. These developments have given rise to a new area of criminological study, often called 'green criminology'. Yet in all the theorising that has taken place in this area, there is still a lack of specific focus on those actually suffering harm as a result of environmental degradation. This book represents a unique attempt to substantively conceptualise and examine the place of such 'environmental harms' in justice systems both nationally and internationally. Grounded in a comparative approach and drawing on critical criminological arguments, this volume examines many of the areas that are often overlooked in research including environmental crime, international law, victimology, socio-legal studies and physical sciences as well as professionals involved in policy making processes.

Building a Culture of Lawfulness

Math B. Grant

2022-01-01 This book is the first interdisciplinary study of the rule of law in an environment of complementary culture. It argues that the rule of law should not be defined solely through the development of institutions. Recognizing that the rule of law is most often misunderstood by many, the book describes the benefits of the rule of law as well as its limitations and limitations.
