Some heavy oil, and about half the bitumen produced from the oil sands, is upgraded to create synthetic crude oil. Synthetic oil is usually low in sulphur and contains no residue (very heavy components). Upgrading can occur at or near the producing area. Upgrading is ...

Heavy crude differential widens slightly | BOE Report
Jan 06, 2022 · Canadian heavy crude’s differential to benchmark West Texas Intermediate (WTI) crude widened slightly on Thursday. Western Canada Select heavy blend crude for February delivery in Hardisty, Alberta, last traded at $12.40 per barrel below the WTI benchmark, according to NE2 Canada Inc, having settled at $12.10 per barrel below the U.S. crude benchmark on ...

Western Canadian Select - Wikipedia
Western Canadian Select (WCS) is a heavy sour blend of crude oil that is one of North America’s largest heavy crude oil streams. It was established in December 2004 as a new heavy oil stream by EnCana (now Cenovus Energy Inc.), Canadian Natural Resources Limited, Petro-Canada (now Suncor) and Talisman Energy Inc. (now Repsol Oil & Gas Canada Inc.). It is a ...

Oil sands - Wikipedia
Oil sands, tar sands, crude bitumen, or bituminous sands, are a type of unconventional petroleum deposit. Oil sands are either loose sands or partially consolidated sandstone containing a naturally occurring mixture of sand, clay, and water, soaked with bitumen, a dense and extremely viscous form of petroleum. Significant bitumen deposits are reported in Canada, ...

Refining crude oil - the refining process - U.S. Energy
How crude oil is refined into petroleum products. Petroleum refineries change crude oil into petroleum products for use as fuels for transportation, heating, paving roads, and generating electricity and as feedstocks for making chemicals. Refining breaks crude oil down into its various components, which are then selectively reconfigured into new products.
