Natural Standard Medical Conditions Reference-E Book-Natural Standard 2009-05-19 Health care providers are often approached by patients and clients about alternative therapies, whether preferring or wanting to add therapies as an adjunct to the medical treatment they will be receiving. In addition, many healthcare providers plan to incorporate alternative treatments into their practice for a greater variety of alternative approaches. Whether or not the practice is to have access to information about alternative and integrative therapies and how they may complement each other, or to find out whether herbal therapy is right for their patient, it is important to have accurate and comprehensive information. This book provides access to integrated, evidence-based information on integrative and complementary medicine, encompassed alternative and integrative therapies and products. Coverage includes efficacy and safety, mechanisms of action, pharmaceutical, and drug interactions. Vitamins and Minerals

Vitamin B12: 2013-03-12 B12 is also one of the most commonly deficient vitamins. It is very difficult to reach the maximum allowance for this vitamin if you consume an appropriate amount of it. The best way to get B12 is by taking supplements, but it is important to be aware of the effects of deficiency. B12 deficiency causes fatigue, weakness, and other symptoms. It is important to also be aware of the effects of deficiency on the body. B12 is a non-essential nutrient, meaning that it is not stored in the body. The body needs to be replaced every day. It is important to get B12 from food or supplements.

Lamotrigine

Lamotrigine appears to delay the seizure onset time compared to placebo. Lamotrigine also compares favorably to other treatments for partial or secondary generalized seizures and is recommended as an alternative to carbamazepine and phenytoin for treatment-refractory seizures. Lamotrigine is metabolized in the liver and the half-life is approximately 3.5 days. This means that the drug can be cleared from the body in 5-7 days. Lamotrigine is primarily metabolized in the liver by CYP2C9 and CYP2C19. This can lead to increased levels of lamotrigine if the CYP2C9 or CYP2C19 enzymes are inactive. The drug is excreted in the urine and bile.

Recent Trends in Medicinal Plants Research - 2012-11-13

Plants and other living organisms have great potential to treat human disease. There are two distinct types of biomedical research that seek to develop this potential. One type of research explores the value of medicinal plants as traditionally used and studies of these plants have the potential to determine which plants are most potent, optimize dosages and dose forms, and identify safety rules. Another type of research aims to identify single molecules from plants that have interesting bioactivities in isolation and might be useful lead compounds for the development of pharmaceutical drug. This new volume of Advances in Botanical Research covers the recent trends in Medicinal Plants Research over 11 chapters. Topics that are covered include Development of Drugs from Plants – Regulation and Evaluation, Chinese Herbal Medicines for Rheumatoid Arthritis, and Taxol, camptothecin and beyond for cancer therapy.
