of reptiles and amphibians, both common and rare, found in the Indian faunal limits. There has been no book to rival J C Daniel’s earlier Book of Indian Reptiles, also published by the Bombay Natural History Society in 1983. He has now presented an entirely new text of not only a large number of reptiles, but has also described frogs, toads, and other amphibians, a much neglected group that is revealed in this book as picturesque, and biologically interesting as any other group of animals. This book contains field observations and photographs, and descriptions of 175 species including 53 snakes, 45 lizards of various groups, 31 turtles and tortoises, and 45 amphibians. Almost each species has been illustrated with the line drawings, photographs and reproductions of paintings from the journal of the BNHS. The book satisfies professional zoologists, amateur naturalists, students and the interested general reader alike. There is a reference section with reptiles and amphibians listed separately. Photographic contributions from several members of the BNHS, add contemporary appeal to this exciting new field guide, which also contains snippets of historical information.

Packed with extraordinary photographs, this ground-breaking book represents the first accessible field guide to the reptiles and amphibians of New Zealand, covering all 123 species. From the ancient tuatara to the world’s largest collection of long-lived and live-bearing lizards, every species account includes an accurate distribution map and information on appearance, habitat, similar species and natural history. This definitive guide also features a comprehensive introduction to evolution, conservation, ecosystems and geographic history. This is the ultimate photographic field guide to New Zealand’s herpetofauna, and is a gateway into the world of these fascinating tetrapods for amateur and expert herpetologists alike.

*Field Guide to the Birds of Bangladesh* Richard Grimmett 2021-09-16

Despite being one of the most densely populated countries on Earth, Bangladesh boasts a diverse range of natural habitats, including forests, wetlands and grasslands, and supports a wide range of species including a number of sought after regional specialties. Birds of Bangladesh is the definitive field guide to the rich avifauna of this fascinating and beautiful country. - Covers all 705 species that occur in Bangladesh, including vagrants - 103 superb colour plates, with text on facing pages for quick and easy reference - Concise species accounts describe key identification features, voice, habitats, distribution and status

*Amphibians of North Africa* Daniel Escoriza 2018-03-16

Amphibians of North Africa is a comprehensive compilation of available data on the amphibians and reptiles found in various ecosystems across North West Africa and parts of the Mediterranean region. It is essential to identifying and understanding the ecological role of regional herpetofauna and its conservation importance. It examines the biological origins and diversity of amphibians in North Africa, along with their diverse ecosystems, including deserts, grasslands and sub-tropical forests. The book features detailed descriptions of the adult and larvae stages of species, such as the North African fire salamander, the common painted frog, Bronsgerma’s toad and the Mediterranean tree frog. This book is a vital resource for herpetology and ecology students and researchers, helping them identify, understand and conserve these amphibians and reptiles in their various habitats across the North African and Mediterranean regions. Presents the only book on research and species recognition of North West African and Mediterranean amphibians and reptiles in all life phases.

*Birds of Bangladesh* Dipak Basu 2016-04-12
