Security Insecurity And Migration In Europe Dr Gabriella Lazaridis

Security, Insecurity and Migration in Europe: Gabriella Lazaridis 2018-04-01 Immigration has been framed in terms of security concerns, mutation issues have simultaneously grown in terms of immigration security concerns. The book addresses the key questions of whether immigration has to be framed as a security issue, and the relationship between immigration and security. The book also explores the implications of the securitization of migration for the way we think about migration, security, and identity in Europe.

The Politics of Insecurity: Jean-Yves Poumay 2009-02-27 The book addresses the politics of insecurity, focusing on how insecurity is produced, reproduced, and transformed in political processes. It explores the ways in which insecurity is constructed and used as a political tool, and the ways in which it is experienced by individuals and communities.

religion can be a source of both human security and insecurity in a globalizing world. Shani offers a ‘critical’ human security paradigm that seeks to de-essentialize the individual by recognizing the culturally contested and embedded nature of human identities. The work argues that religion serves an important role in re-embedding individuals detached from their communities by neo-liberal globalization and will be of interest to students of International Relations, Security Studies and Religion and Politics.

Food Security and Sociopolitical Stability - Christopher B. Barrett 2013-09-26 Global food price spikes in 2008 and again in 2011 coincided with a surge of political unrest in low- and middle-income countries. Angry consumers took to the streets in scores of nations. In some places, food riots turned violent, premising governments and in a few cases contributed to their overthrow. Foreign investors sparked a new global land rush, adding a different set of pressures. With scientists warning that the world has entered a new era of volatility due to food prices, price spikes exaggerated by climate change, the onset of widespread food insecurity and sociopolitical instability weighs on policymakers worldwide. In the past few years, government and philanthropic foundations began redoubling efforts to revitalize agricultural research and technology transfer, as well as to accelerate the modernization of food value chains to deliver high quality food more cheaply, faster, and in greater volumes to urban consumers. But will these efforts suffice? This volume explores the complex relationship between food security and sociopolitical stability up to roughly 2025. Organized around a series of essays by leading global technical experts, a key message of this volume is that actions taken in an effort to address food security stressors may have consequences for food security, stability, or both that ultimately matter far more than the direct impacts of biophysical drivers such as climate or land or water security. The means by which governments, firms, and private philanthropists tackle the food security challenge of the coming decade will fundamentally shape the relationship between food security and sociopolitical stability.

Technologies of InSecurity - Katja Franko Aas 2008-08-21 Technologies of Insecurity examines how general social and political concerns about terrorism, crime, migration and globalization are translated into concrete practices of securitization of everyday life. Who are we afraid of in a globalizing world? How are issues of safety and security constructed and addressed by various local actors and embraced in a variety of surveillance systems? Examining how various forms of contemporay insecurity are translated into and reduced to issues of surveillance and social control, this book explores a variety of practical and cultural aspects of technological control, as well as the discourses about safety and security surrounding them. Insecurity is a politically and socially constructed phenomenon, with a variety of meanings and modalities. And, exploring the inherent duality and dialectics between our striving for security and the simultaneous production of insecurity. Technologies of Insecurity considers how mundane objects and activities are becoming sources of risk which need to be neutralized. Any ordinary arenas - such as the workplace, the city centre, the football stadium, the airport, and the internet - are imbued with various notions of risk and danger and subject to changing public attitudes and sensibilities, the critical deconstruction of the means between everyday surveillance and (in)security pursued here provides important new insights about how broader political issues are translated into concrete and local practices of social control and exclusion.

Of Fears and Foes - Jose V. Ciprut 2000 At the end of the deadliest century known to mankind, the world still finds itself mired in Bloodshed. In addition to formal inter-state conflict, we see an increase in other forms of organized violence, including ethnic warfare, terrorism, civil conflict, and internationally associated “police” actions. The explanatory power of traditional notions of international security, which has provided a cornerstone for international relations theory as a whole, seems increasingly inadequate in helping to understand the workings of global security. Ciprut integrates the innovative thinking of some of the best scholars working on international relations and systematic security issues today. He offers a fundamental reassessment of what constitutes security and insecurity in an emerging global environment.
